

Landscape Architecture

We provide landscape architectural / urban design services for naturalized and urban landscapes including parks, institutional, commercial, residential and transportation related projects.

Our approach integrates environmental considerations from conceptual planning through detailed design and construction.

(Under Construction)

Old Firehall Plaza Hard Surfacing

Inukshuk provided an attractive surface treatment for this historic Whitehorse building. The design emphasized the site's role as an urban plaza for gathering, orientation and interpretation and blended the existing treatment present on First Avenue with landscaping cues taken from the riverside Confederation Park.

Client: Government of Yukon

Whitehorse Public Safety Building

Inukshuk developed a landscaping design concept for this unique, high profile site. The plan incorporates two major public statues, several city endorsed objectives and the project team confronted a number of design challenges, including issues related to: entry, arrival and site circulation, grading, site drainage, integration with an adjacent existing snow dump and space use functionality.

Client: City of Whitehorse

White Pass Train Station Sculpture Garden

Inukshuk was hired to produce a landscape design concept for the area in front of the iconic White Pass Building. The surface treatment and design features accommodated a newly proposed dog sled sculpture and the seasonal Christmas tree without impeding pedestrian access through the space.

Client: City of Whitehorse
